CEDAR
Idling type Digital Torque Driver

NDID-150CN

If you adjust the idle torque and click it tightly, the torque and the number of tightenings are recorded perfectly.

As a digital torque driver

● Upper / lower torque setting is OK!　　Notification of set value with buzzer / LED lamp

● 400 data memory data can be output to USB memory

● Convenient with rechargeable battery drive! Safe operation with auto power off

● Real-time data output enables various torque inspections

As an idling torque driver

○ Overwhelming workability of idling type

○ Adjustable idling torque

○ Management of tightening torque
　 and number of tightening

○ Saving and transferring data to
　 USB memory

Click

CEDAR

Comparison of NDID-150CN and DID-4
1.5N・m (up to about standard M4 screw) is more advantageous than DID-4.

Comparison of models				
Content	NDID-150CN		DID-4	
OK / NG judgment of tightening work by setting upper and lower limits	When measuring in PP mode Notification with buzzer and lamp	◎	When measuring in PP mode Notification with buzzer and lamp	◎
Loosen torque test to guess the torque that was lost by loosening the screw	Measured in PP mode Torque in the loosening direction is displayed as "-"	◎	Measured in PP mode Torque in the loosening direction is displayed as "-"	◎
Measure the limit points of screws and screw tightening work. (Breaking torque measurement, etc.)	Measured in PP mode	◎	Measured in PP mode	◎
Take data for graphing torque fluctuations such as tightening process.	Measured in C mode, data is 500 items, 4 sampling intervals	○	Measured in C mode, 800 data Two sampling intervals	○
Tightening test for tightened screws. (First peak measurement)	Cannot measure	✕	Measured in PD mode. Measurement may not be possible depending on the target.	△
Saving tightening torque as data	Save to main memory (up to 400) or USB memory.	◎	Save to main memory (maximum 800)	○
Management of number of tightening with tightening counter (Pokayoke work management)	PP C (screw tightening counter mode) Also displays the number of tightening	◎	In PP mode Buzzer and lamp when the number is complete	○
Idling at the set torque	Idle with variable torque.	◎	Not idle	✕

Model	NDID-150CN		
Range	0.20 – 15.30 kgf・cm / 0. 18 – 13.28 lbf・in / 0.020 – 1.500 N・m (Selectable)		
Accuracy (*)	+/- (1% + 1digit) (0.30 – 15.00 kgf・cm)		
Operation Temp	10 〜 35℃ (Storage Temp 0 〜 45℃)		
Measurement Mode	Mode		Contents
	Screw Counter	PP C	When the grip slip, measure the peak torque. Manage the tightened number at the "CLEAR" timing.
	Peak Hold	PP	Measure the peak torque.
	Real Time Output	C	After trigger detection (direction, torque), save 500 data.
	Track	-	Display the load torque.
Memory Function	Mode		Record destination
	Screw Counter	PP C	USB flash memory
	Peak Hold	PP	Body (MAX. 400 data)
	Real Time Output	C	USB flash memory
	Track	-	Non
Battery	Ni-MH Charge cycles : over 300 times（Time : about 3 hours）		
Auto power off	3 minutes		(Releasable)
Accessories	AC adaptor Bit #1, 2 Hex wrench USB memory Certification of calibration		

(*) Don't include the accuracy of the torque which GRIP-slip rotates.
